

The Problem

Drunk driving is an ongoing and critical threat to road safety, resulting in injury and loss of life.

- In 2022, **13,524** people were killed in alcohol-impaired traffic crashes, representing **32%** of all traffic fatalities.
- A disproportionate number of alcohol-impaired traffic fatalities are caused by drivers at high blood alcohol content (BAC) levels (.15 or above). In 2022, **67%** of those killed in alcohol-impaired crashes involved at least one driver with a BAC of .15 or higher.¹
- In 2022, **35%** (or 9,344) of drivers killed in motor vehicle crashes had alcohol in their systems and **30%** of drivers killed were alcohol-impaired with a BAC of .08 or higher.¹
- In 2022, an estimated **1,578** (or 3%) drivers involved in a fatal crash had a prior DUI offense in the past five years. Among these repeat offenders involved in a fatal crash, **47%** had a BAC of .08 or higher at the time of the crash, including **34%** who had a BAC of .15 or higher.²
- The average DUI offender drives drunk **80 times** before they are arrested.³

Preparing to advocate for stronger DUI laws:

Review your state's DUI fatality, crash, and arrest data (contact your state highway safety office and state police agency) to find out the following:

- What is the magnitude of the problem in your state and surrounding states? How has it grown or changed in recent years?
- Which segments of the population are disproportionately at higher risk of driving while alcohol impaired?
- What are the gaps in the data regarding alcohol-impaired driving that need to be filled?
- What resources are needed to support better DUI data collection?
- What challenges do agencies encounter when reporting DUI data?

Identify legislative gaps in existing DUI laws.

- What are some potential legislative barriers to enhancing the use of impaired driving prevention technology such as ignition interlock devices (IID)?
- What are some possible opportunities to expedite BAC testing (breath, blood, oral fluid) through improved technology?
- What options exist to strengthen laws to better address repeat DUI offenders?

Collaborate with stakeholders.

- Identify challenges to DUI enforcement, prosecution, sentencing, screening/assessments for all impaired drivers, and treatment.
- Identify legislative changes to assist practitioners, such as law enforcement, in addressing DUI.
- Ask practitioners how to increase system efficiency and improve outcomes.

Options to improve DUI laws in your state:

Establish or enhance a state DUI state task force.

Adopt legislation or work with your regulatory agency to form or support your existing state impaired driving taskforce that includes every facet of the DUI system, including multiple jurisdictions, advocacy groups, and other interested parties, to develop a strategic plan to prevent and reduce impaired driving.

Provide more tools to law enforcement.

- Legislate funding for officer training to detect and respond to impaired driving occurrences (e.g., Standard Field Sobriety Testing, Advanced Roadside Impaired Driving Enforcement, Drug Recognition Experts).
- Amend your state's impaired driving law to create or enhance a state Electronic Search Warrant system to streamline warrant acquisition enabling faster blood draws when impaired drivers refuse tests.
- Legislate fingerprinting for all DUI offenders at time of arrest to better track repeat offenders as recommended by the [Government Accountability Office](#).

Mandate screening and assessment for all impaired drivers.

- Ensure that your state law requires all impaired drivers, including first time and repeat offenders, to submit to a substance use and mental health disorder screening/assessment validated for the impaired driving population. This approach can help identify underlying causes of a DUI offense, inform potential treatment decisions, and reduce recidivism.
- Enact a law that requires treatment completion as a condition for driver's license reinstatement or probation if an assessment indicates the need for treatment.

Increase the number of DUI or hybrid DUI/Drug courts.

Pass legislation to expand these specialized court programs—which aim to offer structured treatment supervision and accountability—in your state for high-risk offenders, such as repeat offenders. These programs are evidence-based and highly effective in reducing recidivism and saving costs.

Implement mandatory compliance-based IIDs for all convicted DUI offenders.

One of the most effective countermeasures available to jurisdictions to separate drunkenness from driving is the alcohol ignition interlock device (IID). State laws should require all DUI offenders, including first-time offenders, to install an IID and adhere to compliance-based removal guidelines, such as refraining from tampering with the device, before it can be removed.

Establish enhanced sanctions for high-BAC drivers and repeat offenders.

High-BAC drivers pose a public safety threat and should face increased criminal penalties. As of 2023, forty-five states and the District of Columbia have enhanced penalties for drivers with high BACs.

Enhance administrative license revocation/suspension (ALR/ALS) laws.

Every state has adopted some form of an administrative license revocation or suspension law that allows law enforcement or driver licensing authorities to confiscate a driver's license if an individual fails or refuses a chemical test after arrest. Strengthen these laws by permitting limited driving privileges for those with suspended licenses who install an ignition interlock device.

Improve your state's DUI data collection.

- Revise your state's impaired driving law to mandate alcohol and drug testing of all fatally injured drivers and all surviving drivers involved in fatal and serious injury crashes.
- Enact legislation to mandate that data collection and reporting systems differentiate between the various possible impaired driving offenses (DUI–Alcohol, DUID, and DUI–Alcohol and Drugs).
